

MIDAS # 5716

SOUTH POND

WARREN TWP. KNOX CO.

ELEV 35 FT AREA 517 ACRES

# SOUTH POND

Warren Twp., Knox Co.  
U.S.G.S. Waldoboro East, Me. (7.5')

## Fishes

Brown trout	White sucker
Smallmouth bass	Hornpout (bullhead)
Largemouth bass	Banded killifish
White perch	Pumpkinseed sunfish
Yellow perch	American eel
Chain pickerel	Sea-run alewife
Minnnows	
Golden shiner	

## Physical Characteristics

Area - 548 acres

Temperatures:

Maximum depth - 18 feet

Surface - 70°F

17 feet - 68°F

Principal fisheries: Smallmouth bass, largemouth bass, white perch, chain pickerel

South Pond contains a preponderance of warmwater fish. After resurveying the pond in 1968, a decision was made to undertake an experimental brown trout stocking program. Brown trout were selected because they often can provide a coldwater fishery when water quality is marginal and heavy competition from warmwater species exists. Unfortunately, the program was terminated after 9 years when failing to provide an adequate fishery.

Sea-run alewives spawn in South Pond where both species of bass probably utilize young-of-year alewives as forage. Although these alewives probably limit bass production, the alewives are utilized by bass as forage.

South Pond has a maintained boat launch facility located at Warren Station approximately 1 mile from U.S. Route 1.

Surveyed – August, 1941
